PREFACE TO THE FIRST EDITION

THIS BIOGRAPHICAL DIRECTORY OF AMERICAN MEN OF SCIENCE was begun as a manuscript reference list for the Carnegie Institution of Washington, which made an appropriation of \$1,000 toward the clerical and office expenses. It is hoped that the publication will be a contribution to the organization of science in America. There is here given for the first time a fairly complete survey of the scientific activity of a country at a given period. As a reference book for the field it covers, it may be even more useful in academic circles than *Minerva* or *Who's Who in America*. But the chief service it should render is to make men of science acquainted with one another and with one another's work. There scarcely exists among scientific men the recognition of common interest and the spirit of cooperation which would help to give science the place it should have in the community. It is fully as important for the nation as for men of science that scientific work should be adequately recognized and supported. We are consequently in the fortunate position of knowing that whatever we do to promote our own interests is at the same time a service to the community and to the world.

There are included in the directory the records of more than four thousand men of science, and it is believed that the entries are tolerably complete for those in North America who have carried on research work in the natural and exact sciences. Some are admitted who are supposed to have advanced science by teaching, by administrative work, or by the preparation of text-books and compilations. There are also some whose work has been chiefly in engineering, medicine or other applied sciences, and a few whose work is in education, economics or other subjects not commonly included under the exact and natural sciences. But the book does not profess to cover these fields. The names are included because they are supposed to represent work that has contributed to the advancement of pure science—the term being used in the narrower sense—or because they are found in the membership lists of certain national societies. * * * * *

It was intended that each entry should contain information as follows:

- (1) The full name with title and mail address, the part of the name ordinarily omitted in correspondence being in parentheses.
- (2) The department of investigation given in italics.
- (3) The place and date of birth.
- (4) Education and degrees.
- (5) Positions with dates, the present position being given in italics.
- (6) Temporary and minor positions.
- (7) Honorary degrees and other scientific honors.
- (8) Membership in scientific and learned societies.
- (9) Chief subjects of research, those accomplished being separated by a dash from those in progress.

A star is prefixed to the subject of research in the case of about a thousand of the biographical notes. These are the thousand students of the natural and exact sciences in the United States whose work is supposed to be the most important. In each of the twelve principal sciences the names were arranged in the order of merit by ten leading students of the science. The average positions and the probable errors were then calculated, so that in each science the order of merit was determined together with its validity.

The names were then combined in one list by interpolation, the numbers in each science being taken approximately proportional to the total number of workers in that science. The thousand are distributed among the sciences as follows: Chemistry, 175; physics, 150; zoology, 150; botany, 100; geology, 100; mathematics, 80; pathology, 60; astronomy, 50; psychology, 50; physiology, 40; anatomy, 25; anthropology, 20. The star means that the subject of the biographical sketch is probably among the leading thousand students of science of the United States; but its absence does not necessarily mean that the subject of the sketch does not belong in this group, as the name may not have been considered in making the arrangements.

My object in determining the thousand leading American men of science was to secure a group for scientific study. I have also selected for this purpose the thousand leading men in the history of the world arranged in the order of eminence, and I am selecting a thousand students of Columbia University. My original interest in this work of reference was to secure data for a statistical study of the conditions, performance, traits, etc., of a large group of men of science, and I had intended to include the results of this study in the book. It seems, however, unwise to postpone the publication of the biographical sketches until the scientific study has been completed.¹

I am under unusual obligations to a large number of men of science for assistance in this work. I should be glad to give a list of about two hundred to whom I am particularly indebted, but perhaps some of them would prefer not to have their names mentioned. I have been assisted in the compilation by Mr. Wm. Harper Davis, then assistant in psychology at Columbia University and now assistant professor in Lehigh University; by Dr. H. D. Marsh, then scholar in psychology at Columbia University and now instructor in Ohio Wesleyan University; by Miss M. C. Ennis; and most of all by Dr. Vivian A. C. Henmon, now lecturer in psychology at Columbia University. So much completeness and accuracy as the work may have is largely due to them.

PREFACE TO THE SECOND EDITION

A BIOGRAPHICAL DIRECTORY requires revision if it is to maintain its usefulness. Nearly a third of the names in the present edition are new, and the sketches which appeared in the first edition have in nearly every case been revised. The amount of work required to prepare the revision has been as great as that given to the first edition. The editor has been fortunate in again having had the cooperation of Dr. Vivian A. C. Henmon, now associate professor of educational psychology in the University of Wisconsin. He has also had the assistance of several other former students and colleagues in psychology—Dr. H. L. Hollingworth, now instructor in psychology at Barnard College; Dr. J. V. Breitwieser, now assistant professor of psychology in Colorado

¹ Two papers on the subject have been printed—'Homo Scientificus Americanus: Address of the president of the American Society of Naturalists,' *Science*, N. S., 17: 561-570, 1903, and 'Statistics of American Psychologists,' *Am. Jour. of Psychol.*, 14: 310-328, 1903. A further series of articles, which is now nearly ready, will probably be printed in *Science*. Cf. in regard to the other groups 'A Statistical Study of Eminent Men,' *Pop. Sci. Mon.*, 53: 359-378, 1903, and 'Physical and Mental Measurements of the Students of Columbia University,' *Psychol. Rev.*, 3: 618-648, 1896.

College; Mr. E. D. Rice, now executive secretary in the Pratt Institute; Dr. Charles A. Cockayne, now professor of philosophy in Toledo College; Mr. J. F. Dashiell, now assistant in philosophy in Columbia University, and Mr. L. D. Hartson, now fellow in psychology in Clark University.

There has been no change in the general plan of the work. Greater strictness has been observed in confining its scope to the natural and exact sciences, and for this reason a few names included in the first edition have been omitted. Efforts have been exerted to make the book as complete and accurate as possible. There are of course omissions, if only because some men will not reply even to repeated requests for the information needed.

The thousand leading men of science have been again selected by the methods that were used before, and stars have been added to the subjects of research in the case of 269 new men who have obtained places on the list. The editor's object in selecting this group of scientific men has been to make a study of the conditions on which scientific research depends and so far as may be to improve these conditions. There are printed as an appendix the two statistical studies that have been made.

PREFACE TO THE THIRD EDITION

AN EDITION of this biographical directory should be issued once in five years, and the preparations for a third edition were in progress when war was declared in 1914. The work was then postponed, being resumed in 1916, to be again interrupted in 1917 by the entry of the United States into the war. These delays and the exorbitant cost of paper and printing have added to the difficulties that are inherent in the preparation of such a book. Grateful acknowledgment is here made to the scientific men who have supplied the material and corrected the proofs for the biographies and to those who by subscribing for the book have made possible its publication.

So large a part of the work of collecting and editing the material has fallen to Dr. Dean R. Brimhall that his name appears on the title page. Dr. Alexander Weinstein has also given valuable assistance in the later stages. Others who have assisted in the editorial work are Dr. W. F. Blades, Dr. Grace Helen Kent, Miss Alice Halsey, Dr. Arthur I. Gates, Dr. Richard Painter, Miss Psyche Cattell and Miss Hazel Andrews. During the first half of 1920 the manuscript cards were loaned to the National Research Council, and in turn Dr. Robert M. Yerkes, chairman of the Research Information Service, supplied useful material toward completing the records.

The abbreviations are self-explanatory, except perhaps for scientific societies. A.A. signifies either fellow or member of the American Association for the Advancement of Science; all those properly included in the directory are entitled to be fellows. In the case of other societies an abbreviation is used which is intended to be intelligible to all, rather than a series of letters such as A.I.E.E., with which members may be more familiar. * * * * *

The first edition, compiled in 1904 and 1905 and published at the beginning of 1906, contained about 4,000 biographies; the second edition published at the end of the year 1910, about 5,500. In the present edition, published fifteen years after the first, the

number is about 9,500. This increase may to some extent be due to a more complete collection of the material, but in the main measures the increase in the number of scientific men.

After an interval of ten years, the thousand men whose work for science has been most valuable have been reselected. Stars are prefixed to the subjects of research for these, as well as for those who received this position in a previous edition. The selections were made by a vote of the men competent in each science—some two thousand in all being asked to take part, of whom about one thousand complied. An account of the methods of selection and a further study of the scientific situation are in course of preparation. In the present volume an appendix contains statistics and observations concerning origins and families of American men of science.

PREFACE TO THE FOURTH EDITION

THE FOURTH EDITION of the Biographical Directory of American Men of Science contains about 13,500 sketches and bears witness to the ever increasing number of those engaged in scientific work. There is no change in the general plan of the book. Efforts have been made to include all living Americans who have contributed to the advancement of science, the standards being nearly the same as fellowship in the American Association for the Advancement of Science or membership in the national scientific societies having research as a qualification. The editors are under great obligation to the large number of scientific men who have assisted in the selection of the names to be included in the book and to all those who have supplied the material and corrected the proofs of the biographical sketches. Among those who have assisted in the compilation are Mrs. E. E. Ross, Miss J. B. Christy, Miss Alice Halsey, Miss Jessica McGarrett, Miss Beatrice Greenfield and Mr. Frederic Kuder.

Stars are prefixed to the subjects of research of 250 awarded positions among the thousand leading scientific men of the United States. The methods used in the selection are described in an appendix which also gives some facts concerning the distribution of scientific men in 1927.
